Decisions

Keep the signup form short.
Show pricing before checkout.

Actions

- Maya: finish the welcome email
- Alex: test the mobile upload
- Sam: review the help page

Next review: Friday at 11:00
Bring feedback from the first five users.

Biology revision

Cell membranes

Structure

A phospholipid bilayer surrounds the cell.

Proteins help substances cross the membrane.

Transport

Diffusion: particles move down a concentration gradient.

Osmosis: water moves across a partially permeable membrane.

Active transport requires energy.

Remember

Compare diffusion and active transport.

Explain why surface area matters.
